

AI001 · AI Coding with Replit Agent

AI Coding — Build apps by talking to AI.

For parents: these are the key English coding words your child meets in this course, week by week. You don't need to code — just read a word together and ask your child to explain it back in their own words. The tiny example shows what it looks like in real code.

W1

WORD	WHAT IT MEANS	TINY EXAMPLE
prompt	the instruction you give the AI	<code>"Make a to-do list app"</code>
specificity	the more concrete, the better the answer	<code>"red button, top-right"</code>
scope	how much you ask for in one prompt	<code>one feature at a time</code>

W2

WORD	WHAT IT MEANS	TINY EXAMPLE
context	background info the AI needs	<code>"This is a school app for kids"</code>
constraint	a rule the AI must follow	<code>"Use only Python"</code>
expected output	what you want back, said upfront	<code>"Return a CSV file"</code>

W3

WORD	WHAT IT MEANS	TINY EXAMPLE
few-shot	showing examples of what you want	<code>"Like this: ..."</code>
anchor example	one sample answer that sets the pattern	<code>"Format: Name - Age"</code>
explicit	say it plainly — don't make AI guess	<code>"Always add comments"</code>

W4

WORD	WHAT IT MEANS	TINY EXAMPLE
decomposition	breaking one big problem into steps	<code>1) form 2) save 3) show</code>
milestone	a checkpoint you verify before moving on	<code>"First, just the layout"</code>
scope creep	asking for too much in one prompt	<code>10 features at once X</code>

W5

WORD	WHAT IT MEANS	TINY EXAMPLE
iterate	improve through repeated small changes	<code>"Now make it bigger"</code>
refine	make a working answer better	<code>"Same, but blue"</code>
revert	go back to a previous working version	<code>undo last change</code>

W6

WORD	WHAT IT MEANS	TINY EXAMPLE
expected vs actual	what should happen vs what does	<code>"Should add, but it multiplies"</code>
trace	the error path the program took	<code>read the red error text</code>
reproduce	make the bug happen on demand	<code>"Click twice → it crashes"</code>

W7

WORD	WHAT IT MEANS	TINY EXAMPLE
annotate	add comments that explain the code	<code># this saves the file</code>
explain back	describe the code in your own words	<code>"This loop counts items"</code>
ownership	knowing your code well enough to change it	<code>you can edit it yourself</code>

W8

WORD	WHAT IT MEANS	TINY EXAMPLE
MVP	minimum viable product — smallest useful version	<code>just login + list</code>
ship	release something real to real users	<code>share the live link</code>
retrospective	review what worked and what didn't	<code>what to do better next</code>
