

RS002 · Pokémon Pokédex App

Replit / Python — Interactive Pokédex with dictionaries and battles.

For parents: these are the key English coding words your child meets in this course, week by week. You don't need to code — just read a word together and ask your child to explain it back in their own words. The tiny example shows what it looks like in real code.

W1

WORD	WHAT IT MEANS	TINY EXAMPLE
<code>input()</code>	function that reads what the user types	<pre>name = input("Trainer name? ")</pre>
<code>variable</code>	a named box that holds a value	<pre>hp = 100</pre>
<code>f-string</code>	a string with variables inside { }	<pre>print(f"{name} caught it!")</pre>

W2

WORD	WHAT IT MEANS	TINY EXAMPLE
<code>list</code>	an ordered group of values in []	<pre>team = ["Pikachu"]</pre>
<code>index</code>	the number that locates an item in a list	<pre>team[0]</pre>
<code>.append()</code>	add an item to the end of a list	<pre>team.append("Eevee")</pre>

W3

WORD	WHAT IT MEANS	TINY EXAMPLE
<code>.strip()</code>	remove blank space from start and end	<pre>" go ".strip()</pre>
<code>.lower()</code>	change all letters to lowercase	<pre>"FIRE".lower()</pre>
<code>case sensitive</code>	'A' and 'a' count as different	<pre>"A" == "a" # False</pre>

W4

WORD	WHAT IT MEANS	TINY EXAMPLE
<code>if / else</code>	a two-way branch on a condition	<pre>if hp > 0: ... else: ...</pre>
<code>in / not in</code>	test whether a value is inside a list	<pre>"Pikachu" in team</pre>
<code>while</code>	repeat as long as a condition is true	<pre>while hp > 0: fight()</pre>

W5

WORD	WHAT IT MEANS	TINY EXAMPLE
<code>dict</code>	a key→value mapping written in { }	<pre>p = {"name": "Pikachu", "hp": 35}</pre>
<code>key</code>	the label used to look up a value	<pre>p["name"]</pre>
<code>value</code>	the data stored under a key	<pre>p["hp"] # 35</pre>
<code>KeyError</code>	you asked for a key that isn't there	<pre>p["age"] # KeyError</pre>

W6

WORD	WHAT IT MEANS	TINY EXAMPLE
<code>def</code>	the keyword that defines a function	<pre>def attack(): ...</pre>
<code>parameter</code>	an input the function expects	<pre>def attack(power):</pre>
<code>return</code>	the value the function gives back	<pre> return damage</pre>

W7

WORD	WHAT IT MEANS	TINY EXAMPLE
<code>import</code>	load a Python module to use it	<pre>import random</pre>
<code>random.choice</code>	pick one list item at random	<pre>random.choice(team)</pre>
<code>randint</code>	a random whole number between two ends	<pre>random.randint(1, 6)</pre>

W8

WORD	WHAT IT MEANS	TINY EXAMPLE
<code>game loop</code>	the while-true that keeps the game running	<pre>while True: turn()</pre>
<code>game state</code>	the variables describing what's happening now	<pre>turn = 1; winner = None</pre>
<code>end condition</code>	what makes the loop stop	<pre>if hp <= 0: break</pre>
