

WEEK 1

First Hello with the Agent

Move. Turn. Place.

에이전트에게 첫 명령 내리기 · 영어코딩

BIG PICTURE

8 weeks to a diamond

From one block to a giant diamond — all in code.

한 블록에서 시작해 다이아몬드까지

HOW TO COUNT

Count the axis — one block, one number

- 1 Stand on the start block — that spot is $(0, 0, 0)$.
- 2 $x \rightarrow$ walk **right**. Add **+1** for every block.
- 3 $y \rightarrow$ jump **up**. Add **+1** for every block.
- 4 $z \rightarrow$ walk **forward**. Add **+1** for every block.

Say them in order every time: $(x, y, z) = \text{across, up, forward}$.

한 칸 움직이면 +1 — 오른쪽 x , 위로 y , 앞으로 z . 순서는 늘 (x, y, z)

TYPE IT IN

Put the numbers into Minecraft

^x
across →

^y
up ↑

^z
forward ↗

```
place STONE at (x, y, z)
```

- ✓ Open **Code Builder** (press **C** in the world)
- ✓ Type the numbers in order — **(x, y, z)**
- ✓ Press **Run ▶** — your block appears at that spot

코드 빌더(C) 열고 → (x, y, z) 순서로 숫자 넣고 → Run ▶

CONCEPT

Who is the agent ?

A robot helper inside Minecraft. You give it **commands**, it does the work.

You write one line. The agent moves, turns, or places a block.

에이전트 = 명령을 따르는 로봇 도우미

CONCEPT

Three core commands

move

`agent.move(FORWARD, 1)`

turn

`agent.turn(RIGHT)`

place

`agent.place(DOWN)`

이동 · 회전 · 블록 놓기

CODE

Place, then move

```
agent.place(DOWN)
agent.move(FORWARD, 1)
agent.place(DOWN)
agent.move(FORWARD, 1)
```

Order matters — the agent does lines **top to bottom**.

CODE

Build a straight path

```
# place a block, step forward, repeat by hand  
agent.place(DOWN)  
agent.move(FORWARD, 1)  
agent.place(DOWN)  
agent.move(FORWARD, 1)  
agent.place(DOWN)
```

5 lines of placing = a short row of blocks. 🤖

CONCEPT

Directions the agent knows

FORWARD

the way it faces

DOWN

under the agent

`place(DOWN)` drops a block right under the agent's feet.

PREDICT 🤖

What will the agent do?

Predict first — then click reveal

```
agent.move(FORWARD, 1)
agent.place(DOWN)
agent.move(FORWARD, 1)
agent.place(DOWN)
```

Reveal answer 🔍 reveal

VOCAB

New words today

agent the robot helper that follows your code

command one instruction the agent runs

place put a block down at the agent

turn rotate the agent left or right

에이전트

명령

놓다

돌다

What's wrong here?

buggy

```
# goal: place a block, move, then place again  
agent.place(DOWN)  
agent.place(DOWN)  
agent.move(FORWARD, 1)
```

Think first — then click next.

DEBUG

The fix

Bug: Both `place` commands land on the *same* spot. The agent never moved between them, so the second block overwrites the first.

fixed

```
agent.place(DOWN)
agent.move(FORWARD, 1)
agent.place(DOWN)
```

YOUR TURN!

Build a 7-block path

- ✓ Open your homework world
- ✓ Use `agent.place(DOWN)` + `agent.move(FORWARD, 1)`
- ✓ Make a straight 7-block path
- ✓ Build it again with a different block type
- ✓ Send a photo + walkthrough on KakaoTalk

QUIZ

QUESTION 1 OF 3

What is the agent ?

A loop.

The Minecraft player's pet wolf.

A type of block.

A robot helper that follows your commands.

 QUIZ

QUESTION 2 OF 3

What's wrong?

```
agent.place(DOWN)  
agent.place(DOWN)
```

place needs a number.

You can't place two blocks ever.

Both blocks land on the same spot — no move in between.

DOWN is not a real direction.

QUIZ

QUESTION 3 OF 3

Why does the **order** of commands matter?

Only the first command runs.

The agent runs the last line first.

It doesn't — order is random.

The agent runs lines top to bottom, one at a time.

QUIZ

Your score

0 / 3

Re-read the slides. You'll get it.

↺ retake

First hello done!

Next: loops — let the agent repeat for you.

다음 주: 반복문으로 똑같은 일을 자동으로
