

Chat Commands

Type a word — code runs

채팅에 단어를 입력하면 코드가 실행돼요

BIG PICTURE

You're the controller

Last week you called functions in code. Now **you** call them by typing.

이제 직접 명령어로 함수를 호출해요

HOW TO COUNT

Count the axis — one block, one number

1 Stand on the start block — that spot is $(0, 0, 0)$.

2 $x \rightarrow$ walk **right**. Add **+1** for every block.

3 $y \rightarrow$ jump **up**. Add **+1** for every block.

4 $z \rightarrow$ walk **forward**. Add **+1** for every block.

Say them in order every time: $(x, y, z) = \text{across, up, forward}$.

한 칸 움직이면 +1 — 오른쪽 x , 위로 y , 앞으로 z . 순서는 늘 (x, y, z)

TYPE IT IN

Put the numbers into Minecraft

^x
across →

^y
up ↑

^z
forward ↗

```
place STONE at (x, y, z)
```

- ✓ Open **Code Builder** (press **C** in the world)
- ✓ Type the numbers in order — **(x, y, z)**
- ✓ Press **Run ▶** — your block appears at that spot

코드 빌더(C) 열고 → (x, y, z) 순서로 숫자 넣고 → Run ▶

CONCEPT

What's a chat command ?

Code that runs when you type a **word** in the chat box.

```
def on_bridge():  
    for i in range(6):  
        agent.place(PLANKS, FORWARD)  
        agent.move(FORWARD, 1)  
player.on_chat("bridge", on_bridge)
```

Type **bridge** → the agent builds a bridge.

단어를 입력 → 코드 실행

CONCEPT

Commands can take a number

```
def on_tower(n):  
    for i in range(n):  
        agent.place(STONE, FORWARD)  
        agent.move(UP, 1)  
player.on_chat("tower", on_tower)
```

Type `tower 4` → `n` becomes `4`. `tower 8` → taller!

명령어에 숫자를 함께 보낼 수 있어요

CONCEPT

Pass the number into a function

```
def build_tower(height):  
    for i in range(height):  
        agent.place(STONE, FORWARD)  
        agent.move(UP, 1)  
  
def on_tower(n):  
    build_tower(n)  
player.on_chat("tower", on_tower)
```

채팅 숫자를 함수에 그대로 넘겨줘요

WATCH IT!

Type → pass → build

"tower 3"

→

↓ pass n

```
def build_tower(height):  
    for i in range(height):  
        agent.place(STONE, FORWARD)
```

↑ tower built

입력한 숫자가 함수로 전달돼요

PREDICT 🤔

How tall, step by step?

Predict first — then click reveal

```
def build_tower(height):  
    for i in range(height):  
        agent.place(STONE, FORWARD)  
        agent.move(UP, 1)  
  
player.on_chat("tower", build_tower)  
# you type: tower 4
```

VOCAB

New words today

chat command code that runs when you type a word

argument the value you send with a command

pass handing a value into a function

trigger the thing that makes code run

채팅 명령

인수

전달하다

실행 조건

 DEBUG

What's wrong with this code?

Goal: typing **bridge** builds a bridge — but nothing runs.

buggy

```
player.on_chat("brige", build_bridge)
```

Read the word letter by letter.

DEBUG

The bug

Bug: the command is spelled "brige", so typing `bridge` never matches. Spelling must be exact.

fixed

```
player.on_chat("bridge", build_bridge)
```

YOUR TURN!

Make two commands

 One simple command (no number)

 One command that takes a number

 Pass that number into a function

 Try a small number, then a big one

 Send a video of you typing both

QUIZ

QUESTION 1 OF 3

`player.on_chat("brige", f)` won't fire when you type `bridge`. Why?

The command name is misspelled — it must match exactly.

Functions can't be chat commands.

`bridge` is a reserved word.

You can only have one command.

QUIZ

QUESTION 2 OF 3

You type `tower 4` for `def on_tower(n):`. What is `n`?

Always 0.

4 — the number is passed in as the argument.

The agent's position.

"tower"

QUIZ

QUESTION 3 OF 3

Two commands both named `"build"` — what's the fix?

Add more numbers.

Nothing — duplicates are fine.

Delete one function body.

Give each command its own unique name.

QUIZ

Your score

0 / 3

Re-read the slides. You'll get it.
